                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
The patent discloses an adeno-associated virus serotype 1 (AAV-1) DNA which is characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The rep reading frame encodes three structural proteins, VP1, VP2 and VP3. The regions, are useful in production of recombinant viral vectors for generations, are useful in production of recombinant viral vectors for generations or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host. The present sequence is a $' ITR of AAV-1 DNA which is useful in the production of recombinant viral vector. The ITR forms a T-shaped hairpin structure
                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                              9

The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antirheumatic, antiarthritic, neuroprotective, antidabetic, antithyroid, dermatological, and antiniflammatory. The ASV sequence can be used in gene therapy or as par of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psortaisis, and other autoimmune diseases thy relumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polymucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     expression construct; adeno-associated virus; integration efficiency element; inverted terminal repeat; integration; chromosome; cancer; lymphome; leukemia; multiple myeloma; neuroblastoma; retinoblastoma; inflammatory disease; arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is an adeno-associated virus serotype 1 (AAV-1) DNA characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capaid (Cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 as equence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host

                                                                                                                                                                                                                                                                                      cid sequence encoding an adeno-associated virus innegration efficiency element (AAV INEE), which is devoid of AAV inverted terminal repeats (AAV ITRS) and site-specifically integrates into a host cell chromosome when provided to the host cell in conjunction with an AAV Rep protein. The expression construct can be used as a therapeutic factor for treating a mammal for a pathologic state which is cancer, including lung cancer, colon cancer, renal cancer, and cancer, bile duct cancer, bladder cancer, brain cancer, spinal chord cancer, breast cancer, cancer, broad cancer, esophageal cancer, particular cancer, particular cancer, particular cancer, particular cancer, rethoplostome, skin cancer, stomach cancer, cancer, prostatic cancer, rethoplastoma, swint cancer, particular cancer, thymus cancer or thyroid cancer. Other pathologic state includes inflammatory disease (arthritis), neurodegenerative catset includes inflammatory disease (arthritis), neurodegenerative catset in a particular gene product(8). This sequence corresponds to the AAV serotype I complete DNA including the IEE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

The present invention describes a polymucleotide (I), comprising

C rep coding sequences and parvovirus cap coding sequences. The

C rep coding sequences encodes a DNA binding domain from a first

parvovirus, and a capsid interacting domain from a parvovirus different

C parvovirus, and a capsid interacting domain from a parvovirus different

C from the different parvovirus. Also described: (1) a vector comprising

(I); (2) a cell comprising (I), or parvovirus esp coding sequences and

CC parvovirus cap coding sequences. Where the rep coding sequences and

DNA binding domain from a first parvovirus and a capsid interacting

CC domain from a parvovirus different from the different parvovirus, and

CC domain from a parvovirus different from the different parvovirus, and

CC coding sequences comprise sequences from the different parvovirus, and

CC coding sequences are stably integrated into the genome of the

CC coding sequences are stably integrated into the genome of the

CC coding sequences are stably integrated into waccines, and in

CC associated vitus (rAAV) particle. (I) can be used in producing higher

CC cll; and lybrid parvoviruses or parvovirus vectors, which may be used in

CC ameliorate the symptoms associated with any disorder related to gene

CC ameliorate the symptoms associated with any disorder related to gene

CC active and inverse of invisor or in diagnostic and sereening

CC methods. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 THECCCACTCCCTCTCTGCGCGCTCGCTCGGTCGGTGGGCCTGCGGACCAAAGGTCCGC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to adeno-associated virus serotypes. The present sequence is the DNA sequence of one such serotype (AAV6). AAV6 can be used to contruct AAV viral vectors for use in gene therapy for a range of disorders: cystic fibrosis, cancer, AIDS, atherosclarosis, sickle cell anaemia, thalassaemia, blood clotting disorders and diabetes. The AAV viral vectors have increased transduction efficiency of a particular host cell as the AAV viron containing the AAV vector genome can be modified to express a capsid protein of an AAV serotype that transduces the selected host cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ss; cytostatic; neuroprotective; antiinflammatory; gene therapy;

RESULT 9 ADE76502

```
The present invention describes a polynucleotide (1), comprising parvovirus rep coding sequences and parvovirus cap coding sequences and parvovirus cap coding sequences encodes a DNA binding domain from a first parvovirus, and a capsid interacting domain from a parvovirus different parvovirus. The cap coding sequence comprising (1); or parvovirus comprising (1); or parvovirus rep coding sequences and parvovirus and capsid interacting constition a parvovirus different parvovirus and a capsid interacting domain from a parvovirus and a capsid interacting domain from a parvovirus and a capsid interacting coding sequences are stably integrated into the genome of the coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adenocastic divirus (rAAV) particle. (1) can be used in producing higher stocks of hybrid parvoviruses or parvovirus vectors, which may be used in the delivery of nucleic acids having biological effect to treat or amplicate the symptoms associated with any disorder related to gene expression. The polynucleotide may be used to produce a parvovirus vector companies in subject, e.g. for vaccination. The parvovirus vector may also be used to produce a parvovirus vector may also be used to produce an antisense nucleic acid to a cell in vitro or in vivo, or in diagnostic and screening methods. The present sequence is used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides comprising parvovirus rep coding sequences and parvovirus cap coding sequences, useful in producing higher stocks of hybrid parvovirus vectors for delivering therapeutic nucleic acids to a subject.
                                                          parvovirus; rep; cap; DNA binding domain; capsid interacting domain; recombinant hybrid parvovirus particle; recombinant adeno-associated virus; rAAV; AAV; vaccine; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure, SEQ ID NO 25; 115pp; English.
                      AAV-6 genomic DNA sequence SEQ ID NO:25.

The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antithered antithered dematic, antiarthritic, neuroprotective, antidiabetic, antithyroid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polymucleotide sequence represents an AAV related DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Detecting adeno-associated virus sequences in a sample, useful for e.g. preventing or treating hyperproliferative or autoimmune diseases, comprises subjecting a sample having a DNA to amplification via

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a polynucleotide (I), comprising
parvovirus rep coding sequences and parvovirus cap coding sequences. The
rep coding sequences encodes a DNA binding domain from a first
parvovirus, and a capsid interacting domain from a parvovirus different
from the first parvovirus. The cap coding sequence comprises sequences
from the different parvovirus. Also described: (I) a vector comprising
(I); (2) a cell comprising (I), or parvovirus rep coding sequences and
parvovirus cap coding sequences, where the rep coding sequences encode a
coding sequences comprise sequences from the different parvovirus, the cap
coding sequences are stably integrated into the genome of the
cell; and (3) producing a recombinant hybrid parvovirus particle or adeno
associated virus (rAAV) particle. (I) can be used in vaccines, and in
gene therapy. The polynucleotide (I) can be used in vaccines, and in
gene therapy of nucleic acids having biological effect to treat or
central symptoms associated with any disorder related to gene or
annellorate the symptoms associated with any disorder related to gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               expression. The polymuclectide may be used to produce a parvovirus vector to express an immunogenic polypeptide in a subject, e.g. for vaccination. The parvovirus vector may also be used to provide an antisense nucleic acid to a cell in vitro or in vivo, or in diagnostic and screening methods. The present sequence is used in the exemplification of the
 New polynuclectides comprising parvovirus rep coding sequences and parvovirus cap coding sequences, useful in producing higher stocks of hybrid parvovirus vectors for delivering therapeutic nucleic acids to a
                                                                                                                                                                                                                                                                                                                          parvovirus; rep; cap; DNA binding domain; capsid interacting domain; recombinant hybrid parvovirus particle; recombinant adeno-associated virus; rAAV; AAV; vaccine; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 4721 BP; 1108 A; 1405 C; 1301 G; 907 T; 0 U; 0 Other;

human apolipoprotein E (apoE) or apoA under the control of a regulatory control sequence which directs expression of the gene. The recombinant AAV also comprises a capsid protein selected from an AAV serotype (e.g. AAV) or AAVB) which preferentially expressingh levels of transgene in live. A therapeutically effective amount of apoE or apoA expression is obtained upon delivery of low dose of AAV. The method of the invention is useful for lowering total cholesterol levels in a subject, e.g. for treating atherosclerosis, and for correcting defects in lipoprotein. The present sequence represents AAV serotype 7 (AAV7), which may be used to produce recombinant AAV vectors of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an adeno-associated virus (AAV) clade comprising at least three AAV members, where each member of the AAV clade is

```
phylogenetically related as determined using a Neighbor-Joining heuristic by a bootstrap value of at least 75 % per 100 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, and/or treatment of compositions, psorialsis, wasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative collits. The present sequence represents an adeno-associated virus DNA.

The present sequence is an adeno-associated virus serotype 1 (AAV-1) DNA characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78 Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antirheumatic;

The AAV sequence have the following activities: cytostatic, antirheumatic, antiarthritic, neuroprotective, antidabetic, antirhyroid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polynucleotide sequence

```

The invention relates to an expression construct comprising a nucleic acid sequence encoding an adeno-associated virus integration efficiency element (AAV IEEE), which is devoid of AAV inverted terminal repeats (AAV ITER) and stre-specifically integrates into a host cell chromosome when provided to the host cell in conjunction with an AAV Rep protein. The provided to the host cell in conjunction with an AAV Rep protein. The conjunction with an AAV Rep protein. The mammal for a pathologic state which is cancer, including lung cancer, colon cancer, renal cancer, anal cancer, bile duct cancer, bladder cancer, lymphoma, endomeral cancer, beast cancer, carcer, multiple myeloma, neuroblastoma, ovarian cancer, prostatic cancer, retinoblastoma, skin cancer, stomach cancer, cancer, multiple myeloma, neuroblastoma, ovarian cancer, prostatic cancer, thymus cancer thyroid cancer, other pathologic state includes inflammatory disease (arthritis), neurodegenerative disease, a disease of an organ attributed to the presence of increased or decreased level of a particular gene product(8). This sequence

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruifily.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Gosegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswall Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP From the isogenic strain y2, cn bw sp, the same strain used for the BDGP's Pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

Anote="Vector: pBluescript II SK-; Site_1: EcoRI; Site_2: XhoI; This library, constructed by John Davies and Jeffrey McDermott, combines colbas from CC-1690 cells grown to mid-log phase in TAP (acetate-containing) medium in the light, TAP medium in the dark, HS (minimal) medium in the light, TAP medium in the dark, HS (minimal) medium in ambient levels of CO2 and HS medium bubbled with 5% CO2. PolyA mRNA was purified from each sample, pooled and CDNA synthesized. The CDNA was directionally cloned into lambda ZAP II (Stratagene) in the EcoRI (5') and XhoI (3') sites. pBluescript II SK- plasmids were exclsed from the lambda ZAP clones by superinfection with ExAssist (Stratagene) phage. The library was normalized using method 4 described in Bonaldo et al (1996) Genome Research 6: 791-806."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SAIL 781 E02.v2 SAIL Collection Arabidopsis thaliana genomic clone SAIL 781 E02.v2, genomic survey sequence. BRC Stock Number C88349767; T-DNA left border flanking sequences of
Syngenta Arabidopsis Insertion Library (SAIL) lines are available
through the Arabidopsis Biological Resource Center (ABRC).
Sequences represent a pool of amplified genomic regions and not
single contiguous sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                BB651469 RIKEN full-length enriched, O day neonate cerebellum Mus musculus CDNA clone C230083H05 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Unpublished (2001)

Submitted (02-JUM-1999) Genoscope - Centre National de Sequencage:
BP 191 91006 EVRY cedex - FRANCE (E-mail : segref@genoscope.cns.fr
- Web: www.genoscope.cns.fr)
- webetwination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutcyo Geoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Biffalo, NY. The library is named RPCI-98 and was constructed by partial Ecord digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/dxosophila_bac.htm.

The present sequence is an adeno-associated virus serotype 1 (AAV-1) DNA characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host
                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           adeno-associated virus; AAV; cytostatic; antipsoriatic; antirheumatic;

                                                                                                                     The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chair reaction (PCR). The AAV sequence have the following activities: cytostatic, antitheumatic, antiarthritic, neuroprotective, antidiabetic, antithyroid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune diseases thy proporties.

                                                                                                                                                                                                                             The present invention describes a polynucleotide (I), comprising parvovirus rep coding sequences and parvovirus cap coding sequences and parvovirus cap coding sequences encodes a DNA binding domain from a first parvovirus. The cap coding sequence comprises sequences from the first parvovirus. The cap coding sequence comprising (I); or parvovirus and a vector comprising (I); or parvovirus rep coding sequences and parvovirus from a parvovirus and a capsid interacting commain from a first parvovirus and a capsid interacting commain from a first parvovirus and a capsid interacting coding sequences comprises sequences from the different parvovirus, and the rep coding sequences are stably integrated into the genome of the coding sequences are stably integrated into the genome of the cap coding sequences are stably integrated into the genome of the cap coding sequences are stably integrated into the genome of the cap coding sequences are stably integrated into the genome of the cap coding sequences are stably integrated into the genome of the cap coding sequences are stably integrated into the genome of the capsociated virus (rAAV) particle. (I) can be used in producing higher stocks of hybrid parvoviruses or parvovirus vectors, which may be used in producing physecond the symptoms associated with any disorder related to gene expression. The polynucleotide may be used to produce a parvovirus vector companies and in vitro or in vivo, or in diagnostic and sereening methods. The present sequence is used in the exemplification of the

The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antithermatic, antithermatic, antiarthritic, neuroprotective, antidiabetic, antithermatic, antiarthritic, neuroprotective, antidiaperson of a manufalabetic, antichermatic, antiarthritic, neuroprotective, antidiaperson of a match of a part of a vaccine to treat equence an be used in gene lherapy or as part of a vaccine to treat equences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis, and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polynucleotide sequence represents an AAV related DNA sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .

```
The present invention describes a polynucleotide (I), comprising parvovirus rep coding sequences and parvovirus cap coding sequences. The parvovirus and a capsid interacting domain from a first ferent caps encodes a DNA binding domain from a first ferent parvovirus. The cap coding sequence comprises sequences from the different parvovirus. Also described: (I) a vector comprising (I); (2) a cell comprising (I), or parvovirus rep coding sequences and parvovirus cap coding sequences. ONA binding domain from a first parvovirus rep coding sequences are comprised in the cap coding sequences comprised in the cap coding sequences are stably integrated into the genome of the coding sequences are stably integrated into the genome of the cell; and (3) producing a recombinant hybrid parvovirus particle or adenocasociated virus (rAAV) particle. (I) can be used in producing higher seconds of hybrid parvoviruses or parvovirus vectors, which may be used in the delivery of nucleic acids having bological effect to treat or ameliorate the symptoms associated with any disorder related to gene expression. The polynucleotide may be used to produce a parvovirus vector comprises an immunogenic polypeptide in a subject, e.g. for vaccination. The parvovirus vector may also be used to produce a parvovirus vector acid to a cell in vitro or in vivo, or in diagnostic and screening methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   æ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4 5

The specification describes a method for lowering total cholesterol levels in a subject. The method comprises delivering to the subject a recombinant adeno-associated virus (AAV) comprising a gene encoding a human apolipoprotein E (apoE) or apoA under the control of a regulatory control sequence which directs expression of the gene. The recombinant AAV also comprises a capsid protein selected from an AAV serotype (e.g. AAV or AAV8) which preferentially expresses high levels of transgene in live. A therapeutically effective amount of apoB or apoA expression is obtained upon delivery of low dose of AAV. The method of the invention is useful for lowering total cholesterol levels in a subject, e.g. for treating atherosclerosis, and for correcting defects in lipoprotein. The present sequence represents AAV serotype 7 (AAV77), which may be used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Lowering total cholesterol levels and treating atherosclerosis in a subject comprises delivering a recombinant adeno-associated virus (AAV) comprising an AAV serotype capsid protein or a gene encoding human apolipoprotein B (apos) or apoA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 135.6; DB 14; Length 4721;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an adeno-associated virus (AAV) clade comprising at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Joining heuristic by a boctstrap value of at least 75 % per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, sarcoidosis, diabetes, scleroderma, psoriaisis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitie. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                              61
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rheumatoid arthritis; multiple sclerosis; sarcoidosis; diabetes; scleroderma; psoriasis; vasculitis; Crohn's disease; hemophilia; HIV; bacterial infection; cancer; ulcerative colitis; antirheumatic; antiarthritic; neuroprotective; antillammatory; antidiabetic; antiarthritic; vasctropic; gastrointestinal-gen.; hemostatic; anti-HIV; virucide; antibacterial; cytostatic; antiulcer; dermatological; ds.

The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host. The present sequence is a 5' ITR of AAV-1 DNA which is useful in the production of recombinant
                                                           Adeno-associated virus serotype 1; AAV-1; rep protein; capsid protein; cap protein; recombinant viral vector; gene delivery; gene therapy; vaccine; transgene; inverted terminal repeat; ITR; ss.
                           Novel adeno-associated virus serotype 1 polynucleotide useful for preparation of medicament for delivery of a transgene to a host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1. .41

                                                                                                                                                                         present sequence is the DNA sequence of one such serotype (AAV6). AAV6 can be used to contruct AAV viral vectors for use in gene therapy for a range of disorders: cystic fibrosis, cancer, AIDS, atherosclerosis, sickle cell anaemia, thalassaemia, blood clotting disorders and diabetes. The AAV viral vectors have increased transduction efficiency of a particular host cell as the AAV viron containing the AAV vector genome can be modified to express a capid protein of an AAV serotype that transduces the selected host cell

The invention relates to an expression construct comprising a nucleic acid sequence encoding an adeno-associated virus integration efficiency clement (AAV IEEE), which is devoid of AAV inverted terminal repeats (AAV IEEE), which is devoid of AAV inverted terminal repeats (AAV IEEE) and site-specifically integrates into a host cell chromosome when provided to the host cell in conjunction with an AAV Rep protein. The concert can be used as a therapeutic factor for treating a mammal for a pathologic state which is cancer, including lung cancer, cohon cancer, renal cancer, spinal chord cancer, bladder cancer, lymphoma, endometrial cancer, beophageal cancer, cervical cancer, lymphoma, endometrial cancer, laryngeal cancer, leukemia, cancer, multiple myeloma, neuroblastoma, voraitan cancer, prostatic cancer, retinoblastoma, skin cancer, schoarch cancer, cancer, thymus cancer thyroid cancer. Other pathologic state includes inflammatory disease (arthritis), neurodegenerative disease, a disease of an organ attributed to the presence of increased or decreased level of a particular gene product(s). This sequence

The rep coding sequences a DNA binding domain from a first parvovirus different from a first parvovirus. The cap coding sequences recording sequences a provirus, and a capsid interacting domain from a parvovirus different from the different parvovirus. Also described: (1) a vector comprising (1), cap coding sequences and parvovirus cap coding sequences in the parvovirus of first parvovirus and a capsid interacting command from a first parvovirus and a capsid interacting coding sequences comprise sequences from the different parvovirus, the cap coding sequences comprise sequences from the different parvovirus, and the rep coding sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences are stably integrated into the genome of the coling sequences (TAAV) particle. (1) can be used in vaccines, and in gene therapy. The polynucleotide (1) can be used in producing higher stocks of hybrid parvovirus particle. (2) can be used in producing higher seconds.
                                                                                                                4624

                                                                                                                                                                                                                                                                                                                                                                                                                                             CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   500
     The patent discloses an adeno-associated virus serotype 1 (AAV-1) DNA which is characterised by two inverted terminal repeats (TTR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VPI, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors, vaccine vectors or antisense delivery vectors. The AAV-1 does not induce the formation of neutralising antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host. The present sequence is a 5. ITR of AAV-1 DNA which is useful in the production of recombinant viral vector. The ITR forms a T-shaped hairpin structure
                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is an adeno-associated virus serotype 1 (AAV-1) DNA characterised by two inverted terminal repeats (ITR) and open reading frames for rep and capsid (cap) proteins. The rep reading frame encodes four proteins, Rep 78, Rep 68, Rep 52 and Rep 40, while the cap reading frame encodes three structural proteins, VP1, VP2 and VP3. The AAV-1 sequence or its fragments particularly ITRs, rep and cap coding regions, are useful in production of recombinant viral vectors for gene delivery. These vectors can be used as gene therapy vectors for gene delivery. These vectors and the AAV-1 does not induce the formation of neutralishing antibodies specific to any serotype of AAV hence is useful for transforming host cells, and in the preparation of a medicament for the delivery of transgene to a host

The invention relates to a novel method for detecting adeno-associated virus (AAV) sequences in a sample, which comprises subjecting a sample containing a DNA to amplification via a polymerase chain reaction (PCR). The AAV sequence have the following activities: cytostatic, antithyoriatic, antithyorid, dermatological, and antiinflammatory. The AAV sequence can be used in gene therapy or as part of a vaccine to treat disorders. The method is useful in detecting and/or identifying AAV sequences and isolating novel sequences that are identified. The sequences may be used e.g. for preventing or treating hyperproliferative conditions such as cancers and psoriasis and other autoimmune diseases like rheumatoid arthritis, multiple sclerosis, diabetes, autoimmune thyroiditis, scleroderma or Crohn's disease. This polynucleotide sequence represents an AAV related DNA sequence of the invention.
